

# InspectionWorks Insight

Maximize the power of your data

# Your inspection processes, now more efficient.

**Industrial technology is rapidly advancing. Infrastructure is growing, new complex assets are regularly being introduced, and more data is being generated than ever before. But without proper organization, the power of that data cannot be properly utilized.**

Waygate Technologies InspectionWorks Insight allows you to effortlessly store, share, search, and manage your inspection and maintenance data securely in the cloud—delivering the visibility you need to make the most informed operational decisions.

This software solution pairs with Mentor Visual iQ, the industry's first portable HD video borescope with powerful 3D Phase Measurement and analysis capabilities. Beyond its reliable precision, Mentor Visual iQ, like other RVI products, comes with Menu Directed Inspection (MDI) software. MDI allows you to automatically tag, label, annotate, and report on inspection data—eliminating time-consuming manual processes, as well as human error. The combination of Mentor Visual iQ's intuitive interface and InspectionWorks Insight maximizes the power of MDI software, for the most efficient post-inspection data analysis and report generation.

# Greater access drives better decisions.

The greater the access to data, the better the outcomes. InspectionWorks Insight is the only solution of its kind. Designed to help you make the most out of your inspections, it organizes your data on the cloud to ensure you have what you need to take action.

## Better decisions

Quickly gain insights into operations to implement APM and improve fleet performance. Enhanced data quality and consistency elevates overall visibility, and increased sharing capabilities drive collaboration for faster decision-making.

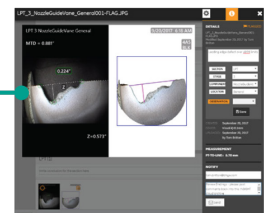

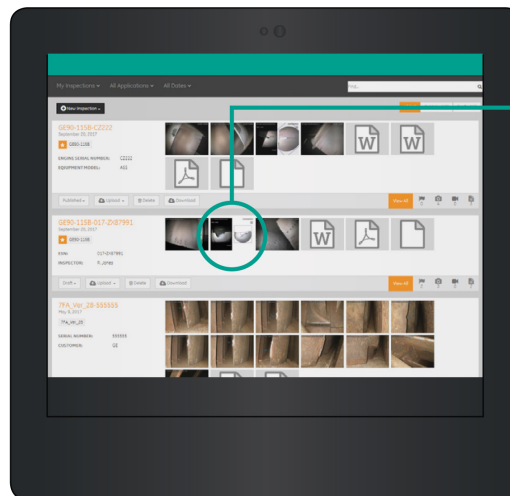

## Increased efficiency

Standardization of inspection processes related to generation and ingestion of data saves time and reduces the overall cost of inspection. Increased data mobility also lowers process time.

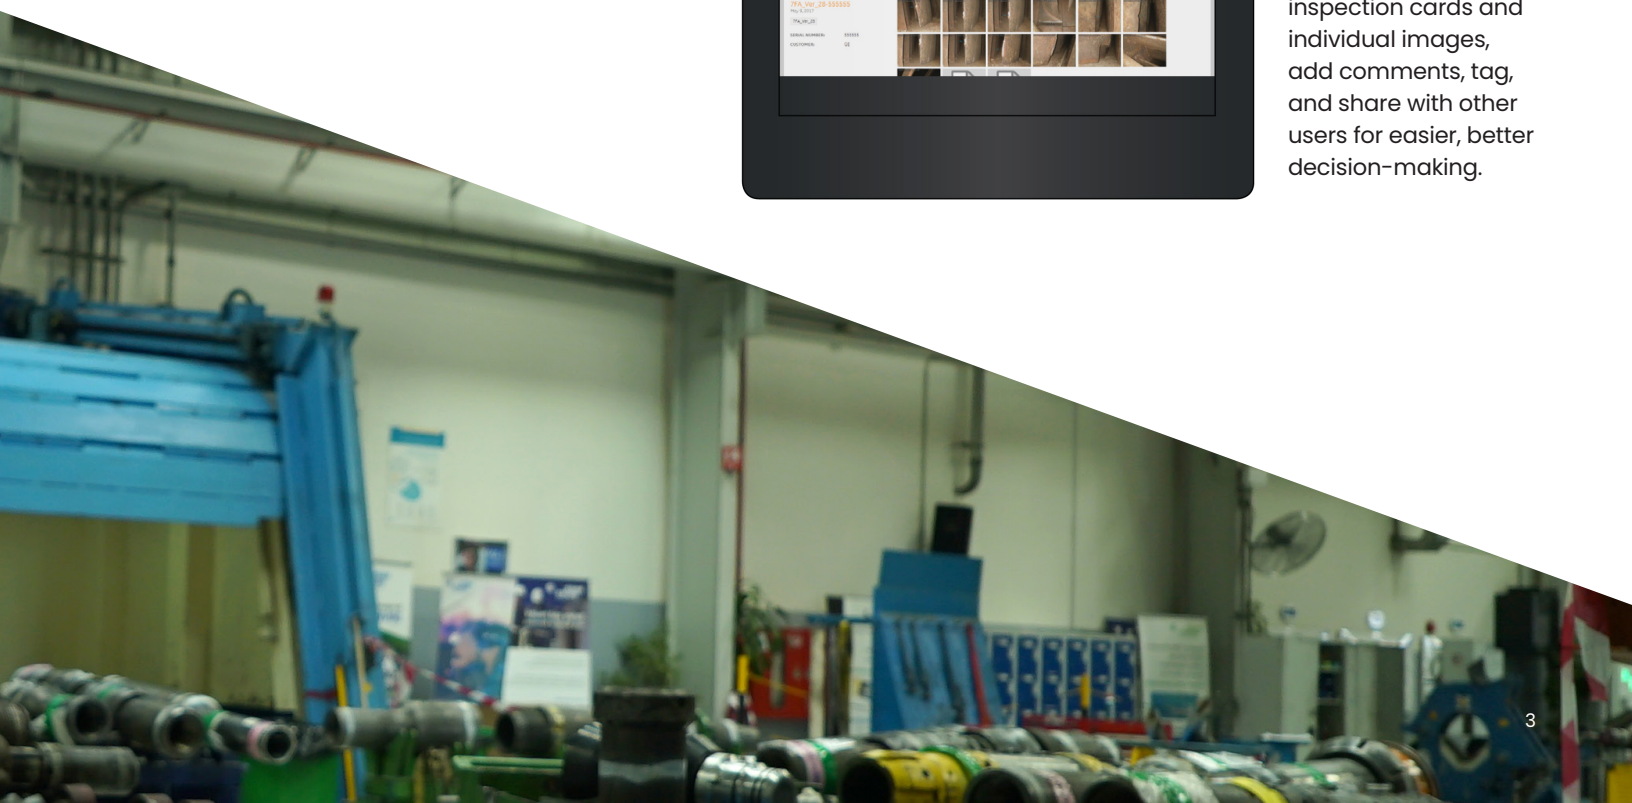

## Trusted security

InspectionWorks Insight is always on par with the latest cyber security standards. Data is encrypted both at rest, and during transit. With each software release, Waygate Technologies runs both static and dynamic tests to ensure security protocols are up-to-date and effective. And with Representational State Transfer (REST) APIs, you get the flexibility, security, and scalability you need to ensure data integrity.

View various inspection cards and individual images, add comments, tag, and share with other users for easier, better decision-making.

# Forward-thinking, legacy-driven.

As the world's digital industrial leader, Waygate Technologies is constantly working to optimize and advance inspection processes. InspectionWorks Insight, and the entire InspectionWorks portfolio, is designed to deliver the best possible solutions for a safer, more reliable future.

Waygate Technologies, formerly GE Inspection Technologies, is a global leader in NDT solutions with more than 125 years of experience in ensuring quality, safety and productivity.
