

# Druck Services: Preventative Maintenance

## What are the benefits of preventative maintenance?

Over time contamination and wear can affect the performance of your ADTS unit.

To ensure the continued reliability of your ADTS , we recommend preventative maintenance is performed at 1000 hours of use, and again at 3000 hours of use.

1000 Hour Service includes:

- Replacement of all port seals
- Replacement of all filters
- Replacement of release valve
- Comprehensive health check

3000 Hour Service Includes:

- All items included on 1000 hours service
- Replacement of all pump seals
- Replacement of vibration mounts
- Replacement of all valves

For full details please consult product handbook.

All preventative maintenance work is carried out by fully trained Druck Technicians.
